The book's target audience are those planning to sit for different styles of postgraduate exams; from the American Board of Ophthalmology examinations or the OKAP, the British style examinations such as the MRCS and FRCS examinations as well as various formats of ICO assessments up to the final stage, FICO.

Importance of study are exciting and rapidly advancing fields of medical science. Our understanding of General Medicine has increased considerably over the last few decades. Furthermore, there is such an overwhelming body of knowledge that it is generally difficult to discern what is important to know in the General Medicine. We have put together this book in order to assist the readers in the learning process. This book may be useful for medical students, ophthalmology residents, practicing ophthalmologists, nurses, internal medicine and those who would like to practice on sample questions in General Medicine. Our past experiences in International Council of Ophthalmology (ICO) exams as well as in MRCS/FRCS examinations reveal that General Medicine are always very difficult for exam candidates. Hence, our attempt to bring together a comprehensive question bank in order to assist those candidates. We have introduced a new format which is putting the answers below the questions therefore the readers can find the answers more easily. Correct answers had been mentioned in bold as well as in detail explanation in order to assist the readers to find a more comprehensive review. We hope that this approach makes the book more user-friendly. First section of the Basic and Clinical Science Course (BCSC) book series by American Academy of Ophthalmology (AAO) was used as the main reference. As the educational requirements have grown, learning processes have changed. Each year, an increasing number of our colleagues with limited time are required to obtain credential from the board in national and international examinations. We strongly recommend that candidates review this book following their study of the basic and clinical textbooks.

This introductory textbook explores the role of research in health care and focuses in particular on the importance of organizing and describing research data using basic statistics. The goal of the text is to teach students how to analyze data and present the results of evidence-based data analysis. Based on the commonly-used SPSS software, a comprehensive range of statistical techniques—both parametric and non-parametric—are presented and explained. Examples are given from nursing, health administration, and health professions, followed by an opportunity for students to immediately practice the technique.

**Regime Change provides in-depth insights into President Bush's handling of national security and terrorism issues pre- and post-9/11 and**

**guidelines for the Democratic presidential candidate's strategic "war on terrorism" that includes: restructuring the Intelligence Community and national security decision-making in the White House; rejuvenating the trans-Atlantic alliance and expanding global collaboration; nation-building in postwar Iraq and Afghanistan; fostering the Israeli-Palestinian peace process; democratization in the Middle East; defusing antagonisms with Muslim nations; nuclear disarmament in Iran and North Korea; dismantling Pakistan's nuclear black market operation; developing economic and security relationships with China in Central Asia; and more. Regime Change gives voters across the political spectrum valuable background for evaluating national security and terrorism positions of both candidates while making a strong case for removal of commander-in-chief Bush along with his White House and Pentagon advisors as a critical step in launching a new multilateral strategy in 2005 for dealing with the root causes and threats of terrorism worldwide. Speeches and papers in Regime Change underscore how Bush's pre- and post-9/11 mindset and predispositions led him to unrealistically use military power to root out "evil" and promote democracy in Iraq and Afghanistan instead of providing multinational leadership in the war on terrorism. The Bush White House overcommitted U.S. military and fiscal resources and underfunded homeland security by selecting the wrong targets in the "war on terrorism" and launching preventive, unilateral wars in Iraq and Afghanistan. Anticipating findings by the 9/11 Commission and several independent commissions and Congressional investigations, Regime Change suggests that 9/11 was preventable and exposes similar failures of the U.S. Intelligence Community in Iraq, Afghanistan, Iran, North Korea and Pakistan's international nuclear black market.**

*Key messagesWhen it comes to mangroves in Vietnam, the payment mechanism for forest environmental services (PFES) can be applied to 8 types of environmental services: (1) carbon absorption and storage; (2) sedimentation and sludge reduction; (3) coastal erosion protection; (4) wave shielding; (5) supplying clean water, filtering heavy metals and pollutants; (6) spawning grounds provision; (7) landscape – tourism; and (8) food and ingredient provision. There are 20 potential buyer groups that could pay for mangrove environment services in Hai Phong. These include: companies focused on*

dredging, sand mining, clean water, energy, banking, petroleum, entertainment, tourism, shipbuilding, air transport, and producers of agricultural, forestry and aquatic products; fishing and sea ports; those involved in the coastal economic zone; industries focused on mining and metallurgy, transportation and thermal power; dike management groups; and residential communities. While some buyer groups have expressed strong commitment to make payments (e.g. banks, energy companies, those producing agricultural, forestry and aquatic products), more research is needed to understand how willing other parties are to participate in paying for environmental services. In Hai Phong, two of these environmental services – (1) carbon absorption and storage and (5) clean water provision and heavy metal filtration – have the largest number of potential buyers. To develop a mechanism for payment for environmental services, four key questions must be answered: (1) Which services are being paid for? (2) Who is paying? (3) How much is the payment? and (4) What is the revenue and expenditure mechanism? Answering these will need long-term, thorough research, particularly demonstrating stakeholders use of environmental services. Based on the pre-feasibility study in 2018–2019, this policy summary answers the first two questions. The last two will be answered in another policy brief, once the study is complete in 2020.

Cross-border trade in electricity is rapidly expanding as a result of technical innovations, economic and geopolitical developments, and the ongoing decarbonisation of the electricity sector in response to climate change. The expansion of electricity networks and the integration of increasing shares of renewable energy (RE) electricity into the grid have made long-distance electricity flows both feasible and desirable. Drawing on the work of experts in trade and energy law and policy, and offering novel, multidisciplinary perspectives on the rapidly evolving landscape shaping international trade in electricity, this book examines the most important challenges - technical, economic, legal and policy-related - posed by long-distance and sustainable electricity trade. The book explores the regulatory implications of the policy instruments aimed at supporting RE electricity and considers how best to promote greater overall coherence in international electricity governance.

This book provides a fresh look at the process by which governments hold themselves accountable to their citizens for performance. Unlike the plethora of other books in the field, it examines all aspects of the Performance Management and Budgeting issue, not only from the federal, state, and local perspectives, but also internationally in both developing and developed countries. Covering both conceptual and theoretical frameworks in performance management and budget, the book analyzes the effectiveness of different approaches. Featuring insights from a group of distinguished contributors, it ties current performance management approaches into the century-old literature on public sector reform and management, and presents arguments for and against performance management as well as recommendations on how to improve the enterprise.

*"This volume contains a wide range of articles. It provides a survey of current developments in research on one of the most influential authors of Hellenistic poetry and reflects the large amount of scholarly interest in Callimachus during the last decade. In the papers there is a particular focus on issues of metapoetics, intertextuality, fictional orality, the impact of poetic collections and the function of Callimachus' poetry in Ptolemaic Alexandria as well as an interest in the reception of Callimachus' poetry among Roman poets."--BOOK JACKET.*

*This volume contains 81 chapters that relate to veterinary and bacterial virology. The first section describes general features of farm and other animals of agricultural importance. The following three sections detail other animal viruses, avian viruses, and viruses affecting aquatic species such as fish and crustaceans. The Section five deals with viruses which infect bacteria. The most comprehensive single-volume source providing an overview of virology issues related to animal and bacteria Bridges the gap between basic undergraduate texts and specialized reviews Concise and general overviews of important topics within the field will help in preparation of lectures, writing reports, or drafting grant applications The goal of enterprise integration is the development of computer-based tools that facilitate coordination of work and information flow across organizational boundaries. These proceedings, the first on EI modeling technologies, provide a synthesis of the technical issues involved; describe the various approaches and where they overlap, complement, or conflict with each other; and identify problems and gaps in the current technologies that point to new research. The leading edge of a movement that began with computer-aided design/computer-aided manufacturing (CAD/CAM), EI now seeks to engage the development of computer-based tools to control not only manufacturing but the allied areas of materials supply, accounting, and inventory control. EI technology is pushing forward research in areas such as distributed AI, concurrent engineering, task coordination, human-computer interaction, and distributed planning and scheduling. These proceedings provide the first common technical ground for comparing, evaluating, or coordinating these efforts. Charles J. Petrie, Jr., is Senior Member of Technical Staff at MCC in Austin, Texas. Topics include: Computer Integrated Manufacturing. Open System Architecture Standards. The results of five workshops on EI modeling topics: Model Integration, Model/Application Namespace, Heterogeneous Execution Environments, Metrics and Methodologies, and Coordination Process Models.*

*This edited volume addresses the issue of threat inflation in American foreign policy and domestic politics. The Bush administration's aggressive campaign to build public support for an invasion of Iraq reheated fears about the president's ability to manipulate the public, and many charged the administration with 'threat inflation', duping the news media and misleading the public into supporting the war under false pretences. Presenting the latest research, these essays seek to answer the question of why threat inflation occurs and when it will be successful. Simply defined, it is the effort by elites to create concern for a threat that goes beyond the scope and urgency that disinterested analysis would justify. More broadly, the process concerns how elites view threats, the political uses of threat inflation, the politics of threat framing among competing elites, and how the public interprets and perceives threats via the news media. The war with Iraq gets special attention in this volume, along with the 'War on Terror'. Although many believe that the Bush administration successfully inflated the Iraq threat, there is not a neat consensus about why this was successful. Through both theoretical contributions and case studies, this book showcases the four major explanations of threat inflation -- realism, domestic politics, psychology, and constructivism -- and makes them confront one another directly. The result is a richer appreciation of this important dynamic in US politics and foreign policy, present and future. This book will be of much interests to students of US foreign and national security policy, international security, strategic studies and IR in general. Trevor Thrall is Assistant Professor of Political Science and directs the Master of Public Policy program at the University of Michigan - Dearborn. Jane Kellett Cramer is an Assistant Professor of Political Science at the University of Oregon.*

*Construction is the country's single largest manufacturing industry. However, it is a sector that lacks benchmarks against which to gauge performance. This modern thinking intends to provide insight to construction productivity improvement. Taking cues from manufacturing sectors such as computer, automobile and chemical companies, this book will apply the lessons learned to building construction. Supported with a range of pedagogical devices, the book will be of equal value to construction managers and civil engineers, and students with different learning methods.*

This book discusses the main legal questions raised by free and open source software (FOSS) licenses and other alternative license models, such as Creative Commons. The legal questions raised by FOSS and other alternative licenses have been the subject of an intense international debate among legal scholars and practising lawyers in the last years. Courts in different jurisdictions have confirmed that the core features of FOSS licenses are compliant with the respective applicable laws and thus enforceable in the respective jurisdictions. What is still missing so far is an in-depth comparative analysis of the legal issues raised by FOSS, Creative Commons and other alternative license on a worldwide scale. This book presents a general report on FOSS licenses and alternative license models to establish common ground and enable comparison between jurisdictions. The general report is followed by 24 national reports covering the world's most important IT-markets. General and national reports use the same structure to facilitate the comparison. The book shows that despite the differences in their origins, all FOSS projects use detailed licenses for the organisation of their communities. It also shows the differences in the proofing of these licenses by courts in some jurisdictions and the tailor-made provisions established by some legislators to solve the legal issues raised by the license model.
