Scandinavian Journal Of Social Medicine

The lifecourse perspective on adult health and on health inequalities in particular, is one of the most important recent developments in epidemiology and public health. This book brings together, in a single volume, the work of one of the most distinguished academics in the field. It is the first to specifically take a lifecourse approach to health inequalities and will be essential reading for academics, students and policy makers with an interest in public health, epidemiology, health promotion and social policy. This important sequel to Nordic Social Policy (Routledge 1999) compares welfare state development over the last

twenty years in Denmark, Finland, Norway and Sweden with that of Germany, the Netherlands, the United Kingdom and other Western European countries. Topics covered include: * income distribution, health inequalities and gender equality * gender policies, health and social care services and policy reaction to family changes * social security and employment policies * financing of welfare states. In the context of globalisation, ageing populations, changing employment patterns and rising inequalities, Nordic Welfare States in the European Context offers an empirical analysis of welfare adaptations and a lively discussion of the historical development of European social policy. It finds a greater ambiguity regarding

variation and trends than is commonly suggested. Contrary to expectation, there is little evidence of the Europeanisation of Nordic welfare states, rather the reverse. The comparable and empirical data used in this study make it a unique contribution to understanding current trends in European social policy.

To meet the needs of the rapidly changing world of health care, future physicians and health care providers will need to be trained to become wiser scientists and humanists in order to understand the social and moral as well as technological aspects of health and illness. The Social Medicine Reader is designed to meet this need. Based on more than a decade of teaching social medicine to first-year medical students at the pioneering Department of Social Medicine at the University of North Carolina, The Social Medicine Reader defines the meaning of the social medicine perspective and offers an approach for teaching it. Looking at medicine from a variety of perspectives, this anthology features fiction, medical

reports, scholarly essays, poetry, case studies, and personal narratives by patients and doctors--all of which contribute to an understanding of how medicine and medical practice is profoundly influenced by social, cultural, political, and economic forces. What happens when a person becomes a patient? How are illness and disability experienced? What causes disease? What can medicine do? What constitutes a doctor/patient relationship? What are the ethical obligations of a health care provider? These questions and many others are raised by The Social Medicine Reader, which is organized into sections that address how patients experience illness, cultural attitudes toward disease, social factors related to health problems, the socialization of physicians, the doctor/patient

In recent years, there has been a substantial literature on many facets of the daily lives of the elderly. This volume is a further contribution to the literature, pinpointing the most recent trends in the survival of the elderly and in their physical and mental health. It also describes possible scenarios for the early decades of the twenty-first century. To delineate current knowledge with regard to the health and survival of the elderly is a first step towards preparing projections and improving the efficacy of health policies for the elderly.

This comprehensive interdisciplinary synthesis focuses on the clinical and occupational intervention processes enabling workers to return to their jobs and sustain employment after injury or serious illness as well as ideas for improving the wide range of outcomes of entry and re-entry into the workplace. Information is accessible along key theoretical, research, and interventive lines, emphasizing a palette of evidence-informed approaches to return to work and stay at work planning and implementation, in the context of disability prevention. Condition-specific chapters detail best return to work and stay at work practices across diverse medical and psychological diagnoses, from musculoskeletal disorders to cancer, from TBI to PTSD. The resulting collection bridges the gap between research evidence and practice and gives
